SUMMARY

Software Engineer with **1+ year** of experience who takes a project from a vague ask to a live product with minimal hand-holding. Owns things end-to-end scoping the real problem, making the architecture calls, building it, and staying on after launch instead of walking away. Picks up whatever a project demands quickly, and treats measurable outcomes as the real deliverable, earning repeat client work through dependable, on-time delivery.

TECHNICAL SKILLS

Languages & Frontend: JavaScript, TypeScript, Python, SQL, React, Next.js, Tailwind CSS

Backend & Data: Node.js, Express.js, FastAPI, Flask, REST APIs, PostgreSQL (RLS), MongoDB, Supabase

AI, LLM & ML: GPT-4 API, Ollama, Model Context Protocol (MCP), prompt engineering, LLM guardrails, model training & cross-validation

Infrastructure: Docker, Git, CI/CD, WebSocket streaming, Razorpay API

EXPERIENCE

Web Developer & AI Integration Specialist

May 2025 to Present

Freelance & Upwork

Remote

- Independently scoped, architected, and shipped production-grade full-stack applications for a roster of 10+ clients across React/Next.js and Python/FastAPI/Flask stacks, owning each engagement from project kickoff through launch and post-launch support.
- Architected **Sentinel**, a three-stage LLM safety-guardrail agent built around a rules engine and a self-trained ML classifier (**76% CV accuracy**) with a final LLM review pass, packaged as a plug-and-play MCP plugin now integrated into Claude Desktop, Cursor, and CodeX.
- Engineered the grading system inside **Examly Enterprise**, a tiered assessment platform, cutting grading time by **75%** for **200+ active users** and securing access with Supabase Auth and PostgreSQL Row-Level Security.
- Launched **NexWare ERP**, a multi-tenant SaaS platform unifying workspace management, employee access, inventory tracking, and growth analytics behind a four-tier permission hierarchy, complete with an integrated billing and tax-calculation engine.
- Built **ElderSphere**, a secure elder-care management network with three role-based portals for family members, caregivers, and admins, plus Razorpay-powered donation processing with real-time payment tracking.
- Developed **Agentic Sales Call Center**, a voice-AI lead-qualification system (Vapi, n8n, Google Calendar and Sheets APIs, Twilio WhatsApp) that pulls numbers from a Google Sheet, places outbound calls, and holds a human-like conversation; the instant genuine interest or a callback surfaces, it fires WhatsApp confirmations to both company and client, books the calendar slot, and logs every attempt to a second Google Sheet.
- Improved average page-load speed by **20%** through targeted frontend performance tuning, sustaining reliable uptime across every deployment while earning repeat contracts through consistent, on-time delivery.

Software Developer Intern, Machine Learning Track

Jun 2024 to Jul 2024

IOCL

Guwahati, India, On-site

- Trained and shipped a linear regression forecasting model (scikit-learn, pandas) as lead contributor, sharpening forecast accuracy on live equity market data through iterative feature engineering.
- Constructed a data pipeline covering ingestion, cleaning, and feature preparation that fed the model into a live Flask dashboard used for daily decision-making.
- Automated manual back-office workflows with custom Python and Flask scripts, shrinking processing time by 40% across a multi-person operations team.
- Presented technical trade-offs and solution design directly to internal stakeholders, backing recommendations with clear, data-driven reporting.

Web Developer & SEO Manager

May 2023 to Jul 2023

Synar Technology

Remote

- Directed full-cycle development on multiple concurrent client websites, pairing a React.js frontend with a Flask backend from initial requirements through final deployment.
- Lifted organic traffic by 15% and trimmed front-end rendering time 20% via an integrated technical and on-page SEO strategy.
- Managed client communications and delivery timelines across simultaneous engagements, shipping every project on schedule without exception.

App & Web Developer Intern

Jul 2023 to Aug 2023

Kareng Technologies

Hybrid

- Designed two cross-platform web and mobile applications using a mobile-first, responsive approach across HTML5, CSS3, and JavaScript.
- Partnered with a cross-functional startup team to gather requirements and ship reusable UI components under fast iteration cycles.
- Integrated RESTful API functionality and resolved bugs continuously to keep the user experience reliable and stable.

PROJECTS

Browserpilot ([Link](#))

In active development

TypeScript, Next.js 16, Playwright, Prisma, Turso/LibSQL, BullMQ, Redis, Gemini API

- Built a multi-source, autonomous job-discovery engine that scrapes LinkedIn, Y Combinator, and Indeed simultaneously and verifies each listing with a live screenshot and deterministic DOM check, delivering 100% verified application URLs, 0% hallucinated listings, and a 95%+ cut in manual search time.
- Engineered a three-tier deduplication and relevance-ranking layer that merges duplicate postings via hashing and text-similarity scoring, ranks roles against 100 deterministic criteria, and runs background lifecycle checks, cutting duplicate clutter 90%+ with zero ongoing LLM token cost.

EDUCATION

Bachelor of Technology, Computer Science & Engineering

Guwahati, India

Assam Down Town University
